

Installation instructions

v1.1 2023.01.

1.  uninstall the original camera mount
2.  install the Damperzen vibration isolation mount (4pcs M3x45mm screws, spacers)

first start to tighten the screws by hand, all four of them

if the screws are in the right place and can be easily turned by hand, tighten them with a 2.5mm hex key (Keep in mind that the brass M3 threaded insert in the DJI M300 will fail if the screw is not set in the correct direction when tightened!)

3. Should look like this (It is possible that the colour and length of the spacers may differ from the photo.):
